

Display statistics for old MDM files

One way to checking whether the data were properly read into HLM while creating the MDM file is to check the MDM stats. To do so, select the **Display MDM stats** option from the **file** menu on the main WHLM window.

A window such as shown below will be displayed, where the user can check the type of the **MDM** file, as well as basic input data information of each HLM level. The user should see the correct numbers of records for each level if all the data are read in without errors.

MDM INFORMATION

Version of MDM: 1.50 Type of MDM Normal V-known

Level-1 info

Number of variables	10	level-1 records	7230
---------------------	----	-----------------	------

Missing Data None when mdm was made at analysis time

Input data C:\HLM\Examples\Chapter8\EG1HMLM2.SAV

Level-2 info

Number of variables	3	level-2 records	1721
---------------------	---	-----------------	------

Input data C:\HLM\Examples\Chapter8\EG2.SAV

Weight variable

Level-3 info

Number of variables	3	level-3 records	60
---------------------	---	-----------------	----

Input data C:\HLM\Examples\Chapter8\EG3.SAV
