Preface	5
List of examples	vii
1 New Developments in LISREL 8	1
1.1 PRELIS	1
1.1.1 Variables	2
1.1.2 Data	2
1.1.3 Matrices	2
1.1.4 Multivariate multinomial probit regressions	3
1.1.5 Asymptotic Variances and Covariances	3
1.1.6 Simulation	4
1.2 LISREL	4
1.2.1 Model	5
1.2.2 Estimation and Testing	6
Maximum Likelihood	7
Weighted Least Squares	7
Weighted Least Squares based on Augmented Moment Matrix	8
Test of the Model	9
1.2.3 Multigroup Analysis	9
1.2.4 General Covariance Structures	10
1.2.5 Command Languages	10
1.2.6 Path Diagrams	11
1.2.7 Windows Interface	11
1.2.8 Output	12
2 Multilevel Modeling	13
2.1 Introduction to Multilevel Modeling	13
2.2 Theoretical Background	14
2.2.1 A fixed parameter linear regression model	15
2.2.2 A level-2 model	17
2.2.3 A general level-3 model	19
2.2.4 Parameter estimation	22
IGLS estimators	27
2.2.5 Statistical inference	27
Standard errors	28
Contrasts	28
Empirical Bayes estimates	30
Likelihood ratio tests	31
2.2.6 Multilevel logit models	32
Introduction	32
A level-3 logit model	32
Estimation considerations	37
2.3 Multilevel Input Files	39
2.3.1 Data file	40
2.3.2 Syntax file	41

	Syntax overview	41
	Guidelines for constructing or changing the input file	42
	OPTIONS	42
	ID <i>n</i>	46
	RANDOM <i>n</i>	47
	RESPONSE	48
	FIXED	48
	COV <i>n</i> PAT	49
	COV <i>n</i> VAL	54
	FIXVAL	55
	CONTRAST	56
	MISSING_DAT	58
	MISSING_DEP	59
	SUBPOP	60
	TITLE	61
2.4	Multilevel Output Files	61
	Analysis requested	62
	Data summary	63
	Fixed part of model	64
	Log-likelihood value	64
	Random part of model	65
	Random coefficient covariance and correlation matrices	65
	Technical details	67
	Empirical Bayes estimates: the output files *.BA2 and *.BA3	67
	Residuals: the output file *RES	68
2.5	Multilevel Examples	69
2.5.1	Analysis of 2-level repeated measures data	69
	Description of the data	69
	Variance decomposition	70
	Modeling linear growth	74
	Modeling non-linear growth	79
	Introducing a covariate while modeling non-linear growth	85
	Complex variation at level 1 of the model	87
	Conclusions	90
2.5.2	Analysis of air traffic control data	90
	Variance decomposition model for Air Force data . .	92
	Non-linear model for air traffic data	96
	Including additional variables in the air traffic data analysis	99
2.5.3	A multivariate analysis of educational data	102
	A variance decomposition model	104
	Adding explanatory variables to the model	109
2.5.4	Analysis of CPC survey data	113
	3-level model for subset of CPC survey data	115
	Three-level model for the educational sector	121
	Three-level model for the construction sector	125
3	Other New Statistical Features	129
3.1	Two-Stage Least-Squares	130
	3.1.1 Implementation	132
	3.1.2 Residual Analysis	133
	3.1.3 Regression Models	134
	Example: Prediction of Grade Averages	134

3.1.4	Econometric Models	136
	Example: Klein's Model I of US Economy	137
	Example: Tintner's Meat Market Model	141
3.2	Exploratory Factor Analysis	143
	Example: Exploratory Factor Analysis of Nine Psychological Variables	147
3.2.1	Number of Factors	153
3.2.2	Factor Scores	155
3.3	Principal Components	157
	Example: Principal Components of Five Meteorological Variables	158
3.4	Normal Scores	161
	Example: Normalizing the Nine Psychological Variables	162
	Example: Normalizing WORDMEAN and COUNTDOT	165
3.5	System Files	168
3.5.1	The PRELIS System File	168
3.5.2	The Data System File	169
3.5.3	The Model System File	170
3.6	Latent Variable Scores	170
3.7	Interaction and Non-Linear Models	171
3.7.1	Estimation by TSLS	172
	Example: The Kenny—Judd Model	172
3.7.2	Estimation by Means of Latent Variable Scores	174
3.8	Simulation	175
4	Standard Errors and Chi-Squares	179
4.1	Standard Errors	179
4.2	Chi-squares	180
4.3	LISREL implementation	181
4.4	Other Fit Statistics	182
4.5	GF File	182
4.6	Examples	183
A	Robust Standard Errors and Chi-Squares	191
A.1	Single Group: Covariance Structures	192
	Definitions	192
	Fit functions	194
	Results	195
A.2	Single Group: Mean and Covariance Structures	196
	Fit functions	197
A.3	Single Group: Augmented Moment Matrix	198
	Definitions	199
	Fit functions	199
A.4	Multiple Groups: Covariance Structures	199
	Definitions	200
	Results	201
A.5	Multiple Groups: Mean and Covariance Structures	202
A.6	Multiple Groups: Augmented Moment Matrices	202
B	Why are t-Values for Error Variances Equal?	203
	SIMPLIS	205
	LISREL	206
C	Problems with Analysis of Correlation Matrices	209

D	PRELIS Syntax Overview	215
D.1	PRELIS syntax diagram	217
D.1.1	Date input commands	217
D.1.2	Data manipulation commands	217
	Scale types	217
	Recode and label categories	218
	Transformation and creation of variables	218
	Select cases and variables	218
D.1.3	Treatment of missing values	219
D.1.4	Analysis and output commands	219
E	LISREL Syntax Overview	221
E.1	LISREL syntax diagram	223
E.1.1	Input specification commands	223
E.1.2	General analysis specification commands	224
E.1.3	LISREL model specification commands	224
E.1.4	Output specification commands	226
E.2	Notation	228
F	Multilevel Syntax Overview	229
F.1	Multilevel syntax diagram	231
	References	233
	Author index	241
	Subject index	243
